Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1.   (Currently Amended) A printer comprising:

a receiving section which receives printing jobs;

a storage section which stores the received printing jobs;

a printing section which executes the printing jobs extracted from the storage section;

a determining section which determines whether a page index of each page or a job index of [[the]] a printing job which has been received by the receiving section includes information on special printing;

a display section which displays a list of the printing jobs that are determined as including information on the special printing in the page index or the job index by the determining section;

an input section which accepts a printing job selected by a user from the displayed list; and

a control section which extracts from the storage section the printing job selected by the user, and causes the printing section to execute the selected printing job,

wherein the control section prevents the printing section from printing any of the received printing jobs that include information on the special printing that are stored in the storage section, until the input section receives a selection made by the user for printing one or more of the received printing jobs that include information on the special printing, and

wherein the one or more of the received printing jobs that include information on the special printing also include information on normal printing of at least one or more pages of the printing jobs.

2.   (Canceled).

3.   (Original)   A printer according to claim 1, wherein the special printing is printing on a special paper sheet other than a normal paper sheet.

4. (Original) A printer according to claim 3, wherein the special paper sheet is a tab paper sheet.

5. (Currently Amended) A printer according to claim 3, further comprising:

a paper feed section which feeds [[a]] the special paper sheet to the printing section; and

a sensor which senses absence of [[a]] the special paper sheet in the paper feed section,

wherein when [[a]] the printing job including the special printing is selected by the user through the input section, the control section causes the display section to display absence of the special paper sheet, on condition that the sensor senses absence of the special paper sheet in the paper feed section.

6. (Currently Amended) A print system comprising:

at least one terminal which receives ~~data~~ input data for printing and sends [[a]] printing [[job]] jobs for executing the printing based on the input data; and

a printer which is networked to the terminal and executes the printing [[job]] jobs sent from the terminal to ~~print data~~ the printer,

said printer comprising:

a receiving section which receives the printing jobs sent from the terminal;

a storage section which stores the received printing jobs;

a printing section which executes the printing jobs extracted from the storage section;

a determining section which determines whether a page index of each page or a job index of [[the]] a printing job which has been received by the receiving section includes information on special printing;

a display section which displays a list of the printing jobs that are determined as including information on the special printing in the page index or the job index by the determining section;

an input section which accepts a printing job selected by a user from the displayed list; and

a control section which extracts from the storage section the printing job selected by the user, and causes the printing section to execute the selected printing job,

wherein one or more of the received printing jobs include information on the special printing and also include information on normal printing of at least one or more pages of the printing jobs.

7.   (Canceled).

8.   (Original)   A print system according to claim 6, wherein the special printing is printing on a special paper sheet other than a normal paper sheet.

9.   (Original)   A print system according to claim 8, wherein the special paper sheet is a tab paper sheet.

10.   (Currently Amended) A print system according to claim 8, wherein said printer further comprises:

a paper feed section which feeds [[a]] the special paper sheet to the printing section; and

a sensor which senses absence of [[a]] the special paper sheet in the paper feed section,

wherein when [[a]] the printing job including the special printing is selected by the user through the input section, the control section causes the display section to display absence of the special paper sheet, on condition that the sensor senses absence of the special paper sheet in the paper feed section.

11.   (Currently Amended) A printing method comprising:

receiving printing jobs;

determining whether a page index of each page or a job index of the received printing job includes information on special printing;

executing the printing jobs that are determined as not including information on special printing in the page index or the job index;

displaying a list of the printing jobs that are determined as including information on the special printing in the page index or the job index without executing the printing jobs;

accepting a printing job selected by a user from the displayed list; and

executing the printing job selected by the user,

wherein one or more of the received printing jobs include information on the special printing and also include information on normal printing of at least one or more pages of the printing jobs.

12. (Original) A printing method according to claim 11, wherein the special printing is printing on a special paper sheet other than a normal paper sheet.

13. (Original) A printing method according to claim 12, wherein the special paper sheet is a tab paper sheet.

14. (Canceled).

15. (Canceled).

16. (Currently Amended) A printer according to claim 1, wherein execution of a printing job including the special printing is prevented unless a job selection made by a user is received the input section receives a selection made by the user for printing the printing job.

17. (New) A print system according to claim 6, wherein execution of a printing job including the special printing is prevented unless the input section receives a selection made by the user for printing the printing job.

18. (New) A printing method according to claim 11, wherein execution of a printing job including the special printing is prevented unless the input section receives a selection made by the user for printing the printing job.
